GPS CAPABILITIES

cargo carrying unit

CARGO CARRYING LOGISTIC SOLUTIONS FOR THE 21ST CENTURY OILFIELD

Rental, Consignment, Lease Programs plus Purchase of Standard or Custom Built Cargo Carrying Units

KEY BENEFITS

With GPS Transponders, Paragon tracks, monitors and locates every piece of our equipment online, with access for our customers to get accurate data at all times.

KEY FEATURES

GPS equipped and online tracking on all rental equipment

GPS Satellite Tracking

- Asset tracking for better cost control
- User Friendly web based program
- Multiple User
- Multiple Asset
- Tracking History
- Manage and Track inventory at multiple locations
- Know what assets are In and Out of your locations

This view delivers real-time, global positioning of your mobile assets. With one glance you can see inventory assets that are close, assets that are far, and assets in between. Obtain a quick, visual summary of what's happening with your assets.

- See the real-time, geographic location of mobile assets
- See your offices, customer locations, jobsites, and other points of interest
- Distinguish between equipment in the field or inside your facilities
- Click on a location icon to view the inventory assets of a particular facility
- Click on a particular asset icon for more details about that asset

Paragon Industries utilizes GPS to locate and track its rental CCU equipment in the GOM through the use of a GPS transponder mounted on each piece of equipment in a location to provide accurate transmission to its satellite receiver, with a cover bracket to shield it from damage or loss.

This allows satellite GPS and web technology to improve the tedious process of tracking thousands of pieces of expensive inventory scattered across customer locations, deepwater drilling rigs, offshore platforms, shore bases, marine vessels, and trucks. With it, Paragon is able to log in and instantly locate baskets sorted by asset type, customer, offshore lease block, or serial number.

This capability for the rental CCU tracking has a number of features and benefits to Paragon and its customers, namely:

- Tracking and monitoring all equipment - whether it's in a facility or traveling around the globe.
- The use of complete asset management solution software allows Paragon to be more efficient, more informed, and more profitable.
- Paragon blends GPS and other wireless technologies delivered using a web-based software tailored to our and our customers' business needs.
- GPS tracking devices can transmit position data to secure data centers up to 4 times per day using satellite communication networks.
